

## Eyelash Perming

Makes even the smallest thinnest lashes look remarkable, not only will your lashes look thicker they will look longer.

It will last three whole months that is because lashes go through the three stages of growth, Anagen, Catagen and Telogen, the lashes are all renewed, after three months. So, therefore no need to re-perm for three months.

It is extremely safe, we have been using our system for 10 years, it is a completely comfortable procedure to have performed. After any perming solution the cuticle of the hair is open so perfect time to have your eyelashes tinted which is included with the perm.

It only takes  $\frac{3}{4}$  of an hour for the whole treatment.

Positives (makes tired eyes look great, sagging lids look more open generally brightens up the whole eye area.)

Thinking about having a surgical eye lift (try this first
