

Skin Needling information

Skin Needling is an amazing procedure the technique is used all over the world to smooth out wrinkles and rejuvenate the skin to create a stronger, firmer healthier skin. Needling will flatten out and relax scars, can be performed on all skin colours and types. We need to target the intermediate reticular layer it has the highest number of stem cells, when injury occurs each treatment triggers the production of collagen which fills the depressed scars and deep wrinkles. The skin will be red for about 3 to 4 days crème is applied and after mineral makeup. The results are amazing once the redness dissipates you can see a change in the depth of the scar or wrinkle and over months it just keeps getting better.

What distinguishes it from other treatments such as laser, is that it has no down time, recovery is quick, and it is cost effective compared to other treatments or surgery
Reduced risk of infection.

Depressed Acne scarring can be treated as well as fine line and deeper wrinkles, where there is a loss of elasticity one can achieve great results with firmness. Keep your skin in good condition when you undertake a treatment such as needling, it is so important to keep a regular healthy ageing facial every month to six weeks call it maintenance in looking after your new skin condition.

All clients receive improvement, everyone is an individual and lifestyle always plays an important role in how well the skin responds.

Collagen will deplete quicker from the body with hormonal changes, stress, smoking and poor diet, and not taking adequate skin sun protection.
